

TO DO NO HARM

Ensuring Patient Safety in Health Care Organizations

Julianne M. Morath
Joanne E. Turnbull

Foreword by Lucian L. Leape

CONTENTS

Foreword ix

Lucian L. Leape

Preface xv

Acknowledgments xxiii

The Authors xxvii

Introduction 1

- 1 Declare Patient Safety Urgent and a Priority 12
- 2 Error and Harm in Health Care 23
- 3 Understanding the Basics of Patient Safety 44
- 4 Assume Executive Responsibility 71
- 5 Import New Knowledge and Skills 96
- 6 Install a Blameless Reporting System 120
- 7 Assign Accountability 148
- 8 Align External Controls and Reform Education 181

9 Accelerate Change For Improvement	204
10 The End of the Beginning	234
References	245
Glossary	255
Appendixes	
1 Checklist for Assessing Institutional Resilience	279
2 Creating De-Identified Case Studies for Dissemination	283
3 Medical Accidents Policy: Reporting and Disclosure, Including Sentinel Events	285
4 Medication Safety Team Feedback Form	295
5 Patient Safety Workplan	297
6 Safety Learning Report	300
7 Stop-the-Line Policy: Authority to Intervene to Restore Patient Safety	303
8 Complexity Lens Reflection	308
9 A Brief Look at Gaps in the Continuity of Care	311
10 A Brief Look at the New Look in Complex System Failure, Error, and Safety	313
11 A Reminder on Every Chart	315
12 List of Serious Reportable Events in Health Care	316
13 Statement of Principle: Talking to Patients About Health Care Injury	321
14 VHA Patient Safety Organizational Assessment	322

INDEX

A

- Accelerated communication, 109-110
- Accountability: before accidents happen, 157; blame vs., 84; demonstrating your, 159-166; using disclosure policy to promote, 153-157; engaging the sharp end through safety action teams for, 166-169; for establishing reporting-learning system, 169; grounding safety in strategic/operations plan for, 169-170; increasing call for health care, 148-149; for influencing external environment, 178-179; just culture and reciprocal, 158-159; measuring safety improvements to improve, 171-173; reciprocal, 82; safety culture as one of, 241; studies on disclosure and, 199; when accidents happen, 149-153; work plan for safety to improve, 170-171; working in complexity to improve, 173-178*fig*
- Active failures (or incorrect acts), 31, 49-52
- Adverse drug events, 28
- Adverse event analysis: confidentiality during, 151; creasing process of, 142-146; in the disclosure process, 150-151, 152; disclosure and truth telling during, 151, 153; of high risk procedures, 177; protocol for focused, 152*e*; sequence of, 150
- Adverse events: additional types of, 28-29*e*; adverse drug events, 28; analysis of, 142-146, 150-152*e*, 153; calculating costs of, 90-91; diagnostic mistakes, 30; occurrence probability of, 147*fig*; per 100,100 patient days at hospital, 146*fig*; surgical, 29-30. *See also* Errors; Medical accidents
