

Introduction to Magnetism and Magnetic Materials

Second edition

David Jiles

*Ames Laboratory,
US Department of Energy*

*Department of Materials Science and Engineering and
Department of Electrical and Computer Engineering,
Iowa State University,
Ames, Iowa, USA*

CHAPMAN & HALL

London · Weinheim · New York · Tokyo · Melbourne · Madras

Contents

Preface to the first edition	vii
Preface to the second edition	ix
Foreword	xi
Acknowledgements	xvii
Glossary of symbols	xxiii
SI units, symbols and dimensions	xxix
Values of selected physical constants	xxx
Part 1 Electromagnetism – magnetic phenomena on the macroscopic scale	1
1 Magnetic fields	3
1.1 The magnetic field	3
1.2 Magnetic induction	9
1.3 Magnetic field calculations	18
References	32
Further reading	33
Exercises	33
2 Magnetization and magnetic moment	35
2.1 Magnetic moment	35
2.2 Magnetic poles and Ampèrian bound currents	40
2.3 Magnetization	44
2.4 Magnetic circuits and demagnetizing field	48
2.5 Penetration of alternating magnetic fields into materials	57
References	61
Further reading	61
Exercises	61
3 Magnetic measurements	65
3.1 Induction methods	65
3.2 Force methods	71
3.3 Methods depending on changes in material properties	76
3.4 SQUIDS	83

xiv *Contents*

	References	86
	Further reading	86
	Exercises	86
4	Magnetic materials	89
4.1	Classification of magnetic materials	89
4.2	Magnetic properties of ferromagnets	91
4.3	Different types of ferromagnetic materials for applications	96
4.4	Paramagnetism and diamagnetism	103
	References	108
	Further reading	109
	Exercises	109
5	Magnetic properties	111
5.1	Hysteresis and related properties	111
5.2	The Barkhausen effect and related phenomena	119
5.3	Magnetostriction	121
5.4	Magneto-resistance	128
	References	129
	Further reading	130
	Exercises	130
Part 2	Magnetism in materials – magnetic phenomena on the microscopic scale	133
6	Magnetic domains	135
6.1	Development of domain theory	135
6.2	Energy considerations and domain patterns	146
	References	153
	Further reading	154
	Exercises	154
7	Domain walls	157
7.1	Properties of domain boundaries	157
7.2	Domain-wall motion	168
	References	175
	Further reading	176
	Exercises	176
8	Domain processes	179
8.1	Reversible and irreversible domain processes	179
8.2	Determination of magnetization curves from pinning models	189
8.3	Theory of ferromagnetic hysteresis	198
8.4	Dynamics of domain magnetization processes	205

References	212
Further reading	214
Exercises	215
9 Magnetic order and critical phenomena	217
9.1 Theories of paramagnetism and diamagnetism	217
9.2 Theories of ordered magnetism	228
9.3 Magnetic structure	239
References	258
Further reading	260
Exercises	260
10 Electronic magnetic moments	263
10.1 Classical model of magnetic moments of electrons	263
10.2 Quantum mechanical model of magnetic moments of electrons	266
10.3 Magnetic properties of free atoms	280
References	288
Further reading	289
Exercises	289
11 Quantum theory of magnetism	291
11.1 Electron–electron interactions	291
11.2 The localized electron theory	301
11.3 The itinerant electron theory	309
References	319
Further reading	320
Exercises	320
Part 3 Magnetics – technological applications	323
12 Soft magnetic materials	325
12.1 Properties and applications	325
12.2 Materials for a.c. applications	329
12.3 Materials for d.c. applications	350
12.4 Materials for magnetic shielding	356
References	359
Further reading	360
13 Hard magnetic materials	363
13.1 Properties and applications	363
13.2 Permanent magnet materials	376
References	391
Further reading	393

xvi *Contents*

14	Magnetic recording	395
14.1	Magnetic recording media	395
14.2	Recording heads and the recording process	409
14.3	Modeling the magnetic recording process	419
	References	420
	Further reading	421
15	Magnetic evaluation of materials	423
15.1	Methods for evaluation of intrinsic properties	423
15.2	Methods for detection of flaws and other inhomogeneities	433
15.3	Magnetic imaging methods	447
15.4	Conclusions	453
	References	455
	Further reading	457
	Solutions	459
	Appendix 1: The magnetic field as a relativistic correction to the electric field	511
	Appendix 2: Derivation of Maxwell's equation from the relativistic Lorentz transformation	515
	Author index	521
	Subject index	529

Subject Index

- a.c. applications, materials for, 329
- a.c. bias recording, 418
- a.c. losses in transformers, 326
- adiabatic demagnetization of
 - paramagnets, 107
- alignment of magnetic moments, 140
- alnico, 377
- alternating fields, penetration into materials, 57
- alternating gradient force magnetometer, 74
- aluminum-iron alloys, 335
- amorphous magnetic fibers, 346
- amorphous metals, 98, 339
- Ampère's circuital law, 7
- Ampère's hypothesis, 136
- Amperian current model, 40
- Amperian currents and poles, 40
- analytical balance, 72
- angular momentum of electrons, 265, 267, 268, 269
 - wave mechanical corrections to, 271
- anhysteretic magnetization, 115
 - measurement of, 116
- anisotropic materials, 125
- anisotropy, 114, 150
 - constants, 152
 - cubic, 152
 - and domain rotation, 150, 370
 - energy of domain wall, 158
 - hexagonal, 151
- antiferromagnetism, 168, 234
- antiparallel spin alignment, 234
- artificially structured materials, 348
- atomic force microscopy, 145
- atomic magnetic moment, 90, 135, 281
- atomic orbital angular momentum, 282
- atomic spin angular momentum, 283
- atomic total angular momentum, 284

- band theory of ferromagnetism, 311
- band theory of magnetism, 309
- band theory of paramagnetism, 310
- Barkhausen effect, 119, 141, 197, 424
 - for detection of stress, 424
 - for evaluation of microstructure, 425
 - theory, 120, 197
- bending of domain walls, 173
- Bethe-Slater curve, 299
- Biot-Savart law, 4
- Bitter patterns, 142
- Bloch walls, 157
- bound currents and poles, 40
- boundary element technique, 29
- Brillouin function, 303

- ceramic magnets, 103
- chromium dioxide, 404
 - tapes, 100
- circuits, 368
- classical eddy current power dissipation, 60, 327
- classical theory of diamagnetism, 218
- classical theory of ferromagnetism, 228
- classical theory of paramagnetism, 223
- closure domains, 166
- cobalt-chromium recording media, 400
- cobalt-chromium recording tapes, 404
- cobalt-iron alloys, 354
- cobalt-platinum, 382
- cobalt-samarium, 384

530 *Subject Index*

- cobalt surface-modified gamma iron oxide, 403
- coercimeter, 428, 431
- coercivity 95, 113, 325, 365
- colossal magnetoresistance, 413
- composite magnetic materials, 348
- computational magnetics, 31
- core losses, 98
- correlation effects among electron spins, 316
- Cotton-Mouton effect, 80
- critical behaviour at the ordering temperature, 252
- critical magnetic field
 - under strong pinning, 187
 - under weak pinning, 188
- cubic anisotropy, 152
- Curie temperature, 95
 - and the mean field interaction, 233
 - and thermal energy, 159
- Curie-Weiss law, 224, 259, 306
- Curie's law, 105, 222, 304
- Current loop dipole, 15

- d.c. applications of soft magnetic materials, 350
- data storage densities, 395
 - predicted, 398
- definition of ampere per meter, 5
- demagnetization curve, of permanent magnet, 368
- demagnetizing factors, 50
- demagnetizing field, effect on measurements, 51
- demagnetizing fields, 48, 50
- density of magnetic recording, 417
- diamagnetism, theory of, 217
- diamagnets, 89, 103, 107
 - susceptibility of, 89
- dipole, as a current loop, 15
- dipole, model for leakage field calculation, 441
- dipole moment, 38
- discontinuous magnetization, 119, 197
- disks, magnetic recording, 395
- dissipation, anomalous or excess, 328
- dissipation, classical eddy current, 327

- domain
 - patterns and energy minimization, 146
 - processes, reversible and irreversible, 179
 - rotation, 149, 152, 179
 - and anisotropy, 150
 - wall motion, 149, 168, 424
- domain dynamics, damping, 211
- domain dynamics, relaxation effects, 211
- domain magnetization, 152
- domain magnetization dynamics, 205
- domain walls
 - anisotropy and exchange energies, 163
 - Bloch walls, 157
 - bowing, 173
 - defect interactions, 191
 - effects of stress on, 166
 - effects of weak fields on, 169
 - energy, 158
 - energy balance in, 169
 - forces on, 169
 - motion, 207
 - and the Barkhausen effect, 197, 424
 - and magnetoacoustic emission, 426
 - and magnetostriction, 198
 - Neel walls, 167
 - non-180°, 166
 - 180°, 166
 - pinning
 - by inclusions, 184
 - by strains, 181
 - strong pinning, 187
 - weak pinning, 188
 - planar displacement of walls, 170
 - surface energy, 161, 169
 - thickness, 157, 162
- domains, 135
 - and the magnetizing process, 148
 - nucleation, 148
 - observation of, 141, 143
 - single, 146
 - Weiss domain theory, 137

- eddy current dissipation, 327
- eddy current inspection methods
 - applications of, 446
 - for magnetic materials, 445

- eddy currents, 59
- effect of demagnetizing field, 51
- elastic constant anomalies at critical temperatures, 254
- electric motors, 329
- electrical losses, 98
 - in transformers, 326
- electromagnetic field equations, 16
- electromagnetic induction, 13
- electromagnetic relays, 99
- electromagnets, 97, 327
- electron band theory of magnetism, 309
- electron-electron interactions, 291
- electron microscopy
 - SEM, 145
 - TEM, 144
- electron spin, 270
 - and exchange energy, 295
 - resonance, 101
- electron states, occupancy according to Hund's rules, 284
- electronic energy levels, splitting by magnetic field, 277
- electronic magnetic moment, quantum theory of, 266
- electronic magnetic moments, 263
- electronic orbital magnetic moment, 263
- electronic spin magnetic moment, 264
- electronic total magnetic moment, 265
- energy loss through wall pinning, 198
- energy minimization and domain structure, 146
- energy product, 139, 366
 - typical values for permanent magnets, 101
- energy states of magnetic moment configurations, 140
- equivalent current model, 15
- exchange coupling in insulators, 308
- exchange, direct, 297
- exchange energy, 158
 - dependence on interatomic spacing, 299
 - and electron spin, 295
 - between electrons in filled shells, 299
 - values for various solids, 298
- exchange, indirect, 317
- exchange integral, 293
- exchange interaction, 294, 295
 - hydrogen molecule model, 293
 - oxygen molecule model, 296
 - sinusoidal, 239
- exchange, RKKY type, 318
- exchange spring magnets, 387
- exchange stiffness, 160
- exchange, superexchange, 308
- excited states and spin waves, 251
- Faraday effect, 80, 143
- Faraday's law of induction, 13, 65
- fatigue, effects of, on magnetic properties, 425
- ferrimagnetism, 236
- ferrites, 102, 103, 349, 381
 - hard, 103, 381
 - soft, 102, 349
- ferrofluids, 142
- ferromagnetic resonance, 208
- ferromagnetism, 228
- ferromagnets, 89, 91, 136
 - applications of, 96
- ferroprobes (fluxgates), 429
- fibers, magnetic, 346
- field due to Amperian currents, 42, 43
- field due to poles, 41, 42, 43
- field lines, 50
- finite element methods, 31
- finite element techniques, 29
- flaw detection using magnetic methods, 434
- flux
 - coil
 - moving, 66
 - stationary, 66
 - leakage, 435
 - application of flux leakage method to NDE, 435
 - lines, 49
 - quantization, 83
 - rate of change of, 65
- fluxgate magnetometer, 70
- fluxgates (ferroprobes), 429
- fluxmeter, 66
- flying height for recording heads, 401
- force between moving charges, 4
- force on a current loop, 39

532 *Subject Index*

- force on a dipole, 39
- force on current-carrying conductor in a field H , 12
- free atoms, 280
- Fröhlich-Kennelly equation, 115

- gamma iron oxide, 100, 399, 403
- generators, 329
- giant magnetoresistance, 318
- Globus-Guyot model, 196

- Hall coefficient, 78
- Hall effect, 76
 - magnetometers, 76
- hard disks, structure, 401
- hard magnetic materials, 96, 363
- Heisenberg model of ferromagnetism, 297
- Heitler-London approximation, 293
- Heitler-London model, 293
- helimagnetism, 238
- Helmholz coils, 22
- Heusler alloys, 300
- hexagonal anisotropy, 151
- hexagonal ferrites, 405
- high-frequency applications, 349
- Hubbard model, 316
- Hund's rules, 284
- hysteresis, 93, 111
 - coefficients and magnetic properties, 201
 - effects of microstructure and deformation on, 204
 - loss, 113
 - macroscopic mean field theory of, 198
 - parameters, 112
 - stress dependence of, 428
- hysteresisgraphs, 66

- inclusion theory of domain-wall pinning, 184
- inductance cores, 102
- induction coil methods, 65
- initial permeability, 113
- initial susceptibility
 - in the planar wall approximation, 173
 - in the wall bending approximation, 174
- intensity of magnetization, 44

- interatomic spacing, effect on exchange energy, 299
- iron and low-carbon steels, 350
- iron oxide, 403
- iron-aluminum alloys, 335
- iron-cobalt alloys, 354
- iron-neodymium-boron, 384
- iron-nickel alloys, 337, 352
- iron-silicon alloys, 330
- irreversible magnetization changes, 199
- Ising model, 192, 255
- isolated single domains, 152
- itinerant and local moment models, 316
- itinerant electron model, 309
 - criticism of, 315
- itinerant electron theory, 309
- itinerant exchange, 311

- J-J* coupling, 286

- Kerr effect, 80, 143
- Kundt's constant, 80

- Landau-Lifschitz-Gilbert model, 206
- Langevin function, 107
- Langevin theory
 - of diamagnetism, 218
 - of paramagnetism, 223
- Langevin-Weiss theory, critique of, 227
- laser magneto-optic microscope, 144
- law of approach to saturation, 118
- leakage fields, 434
 - calculation and modelling of, 441
 - finite element calculation of, 443
- Lenz's law of induction, 13
- local pinning fields, 207
- localized atomic moments, 301
- localized electron model, criticism of, 308
- localized electron theory, 301
- localized theory of electronic magnetic moments, 301
- Lorentz microscopy, 144

- magnet assemblies, 370
- magnetic circuits, 48, 54, 368
- magnetic dipole, 14
- magnetic fibers, 346

- magnetic field
 - of circular coil, 20
 - definition, 3, 5
 - generation, 3
 - due to long conductor, 5
 - of long thin solenoid, 18
 - in magnetic materials, 57
 - numerical methods for calculation of, 29
 - patterns around conductor, 4
 - of a short thick solenoid, 25
 - of short thin solenoid, 24
 - of two coaxial coils, 22
- magnetic field computation, 31
- magnetic field, definition of unit, 5
- magnetic field as a relativistic effect, 4
- magnetic fields, sizes in various situations, 10
- magnetic flux, energy associated with, 10
- magnetic flux leakage, 439
 - applications of, 441
 - instruments for automation of, 442
 - models for, 441
- magnetic force microscopy, 74, 145, 448
 - tip/specimen interactions, 450
- magnetic hysteresis, 428
 - applications in NDE, 429
- magnetic imaging, 447
- magnetic induction, 9
 - definition of tesla, 11
 - lines of, 12
- magnetic moment, 35, 135, 263
 - of closed shell of electrons, 280
 - of electron, 263
 - due to orbital angular momentum, 263
 - due to spin angular momentum, 264
 - total, 265
- magnetic order, 136, 247
- magnetic particle inspection, 434
 - applications of, 435
 - 'dry' method, 435
 - fluorescent particles, 435
 - optimum conditions for, 437
 - 'wet' method, 435
- magnetic pole model, 14
- magnetic properties
 - of free atoms, 280
 - microscopic, typical values of, 165
- magnetic quantum numbers, 268
- magnetic recording
 - history, 396
 - materials, 99
 - media, 395
 - materials for, 403
 - tapes, 397
- magnetic resonance, 208
- magnetic shielding, 356
- magnetic storage densities, 395
- magnetic structure, 239, 247
- magnetic tapes, 397
- magnetic units, 15
- magnetite (lodestone), 376
- magnetization, 44
 - in materials with few defects, 195
 - microstructural effects, 189
 - relation to B and H , 45
 - relation to magnetic moment, 15
 - saturation, 46, 93
 - strain effects, 189
 - technical saturation, 124, 148
- magneto-acoustic emission, 121, 426
 - stress dependence of, 427
- magnetographic method of leakage flux detection, 434
- magnetomechanical effect, 428
- magnetometers, 65
- magnetomotive force, 79
- magneto-optic disk drives, 407
- magneto-optic recording devices, 406
- magneto-resistance, 128
 - colossal, 413
 - giant, 318
- magneto-resistive multilayers, 413
- magneto-resistors, 79
- magnetostatic energy, 146
- magnetostriction, 121
 - at an angle θ to the magnetic field, 124
 - field induced, 126
 - forced, 124
 - polycrystalline, 126
 - saturation, 123
 - single-crystal magnetostriction
 - constant, cubic, 125

534 *Subject Index*

- spontaneous, 122
 - in terms of single crystal
 - magnetostriction constants, 125
 - transverse, 127
- magnetostrictive devices, 79
- magnetostrictive materials, 128
- market for hard disk drives, 397
- market for permanent magnets, 364
- maximum energy product, 101
- Maxwell's equations, 16
- mean field, 137, 230
- metallic glasses, 339
- metglas, 340
- micromagnetic modeling, 211
- modelling of magnetization curves based
 - on pinning, 189
- molecular field, 137
- moment of inertia, 264
- motors, 329
- moving coil, 66
 - galvanometer, 67
- multilayers, 128, 318
- mumetal, 337

- nanocomposite permanent magnets, 387
- nanocrystalline materials, 347
- nanostructured permanent magnets, 386, 387
- NDE, magnetic methods for, 423
- nearest neighbour interactions, 232
- Neel temperature, 235, 236
- Neel walls, 167
- neodymium-iron-boron, 100, 384, 391
- neutron diffraction, 240
 - antiferromagnetic scattering, 244
 - Bragg diffraction peaks, 241
 - elastic scattering, 241
 - ferromagnetic scattering, 243
 - inelastic scattering, 245
 - magnetic diffraction peaks, 242
 - paramagnetic scattering, 242
 - topography, 143
- nickel-iron alloys, 337, 352
- ninety degree (90°) domain-wall motion, 427
- nitrogenation of permanent magnets, 389
- non-integral atomic magnetic moments, 312

- numerical methods for calculation of magnetic fields, 29

- orbital magnetic moment
 - of atom, 281
 - of electron, 263
- orbital momentum quantum number, 267
- orbital wave functions, two electron system, Heitler-London model, 293

- order in rare earth solids, 247
- ordered magnetism, theories of, 228
- ordering temperature, 95, 252
- oxygen molecule model for exchange, 296

- paramagnetism, 221
 - classical (Langevin) theory, 223
 - classical (Weiss) theory, 225
 - of 'free' electrons, Pauli theory, 310
 - theory of, 217, 223, 225
- paramagnets, 89, 104
 - applications of, 106
 - field dependence of susceptibility, 105
 - properties of, 104
 - susceptibility of, 89
 - temperature dependence of susceptibility, 105
- Paschen-Back effect, 288
- Pauli paramagnetism, 310
- penetration depth, 58
- permalloy, 337, 352
- permanent magnet steels, 376
- permanent magnets, 100
 - applications, 375
 - materials, 376
 - properties, 363
 - comparison, 390
 - stability, 376
- permeability, 11, 46, 92, 136
 - demagnetizing corrections, 53
 - differential, 46, 95
 - initial, 113
 - relative, 47
- permeance coefficient, 369
- permendur, 354
- perpendicular recording media, 100, 406
- pinning of domain walls
 - critical field, 187, 188

- by inclusions, 184
- by strains, 181
- pinning models, 189
- platinum-cobalt, 382
- pole model, 14, 40
- pole strength, 14, 37
- poles and Amperian currents, 40
- poles and bound currents, 40
- potential approximation for domain-wall motion, 170
- power dissipation due to classical eddy currents, 60
- Preisach model, 419
 - use in magnetic recording industry, 420
- principal quantum number, 267
- proton precession magnetometers, 72
- quantization
 - of angular momentum, 269
 - of electron spin, 276
- quantum mechanical exchange interaction, 294
- quantum number
 - l , 267
 - m_l , 268
 - m_s , 268
 - n , 267
 - s , 267
- quantum theory of
 - electron-electron interactions, 291
 - electronic magnetic moments, 266
 - ferromagnetism, 306
 - paramagnetism, 302
- quenching of orbital angular momentum, 286
- Rayleigh's law, 117
- recording density, 417
- recording devices, 395
- recording heads, 409
 - flying height, 401
 - inductive, 410, 411
 - magneto resistive, 410, 413
- recording materials, 99
- recording media, 99
 - magnetic properties comparison, 403
- recording process, 409
 - reading, 418
 - writing, 413, 415
- recording track density, 402
- relative permeability, 47
- relays, 99, 328
- reluctance, 54
- remanence, 94, 113, 365, 432
- remanence enhanced magnets, 387
- residual field, 432
- resistance magnetometers, 79
- resonance, magnetic, 208
- resonance magnetometers, 81
- retentivity, 92
- reversible magnetization changes, 200
- rigid band model of ferromagnetism (Slater-Pauling), 314
- rigid domain-wall motion, 170
 - initial susceptibility of, 172
- RKKY exchange coupling, 318
- rotating coil, 67
- Russell-Saunders coupling, 285
- samarium-cobalt, 100, 382
- samarium-iron-nitride, 383, 389
- saturable coil magnetometers, 70
- saturation, law of approach to, 117
- saturation magnetization, 46, 93, 365
 - technical, 124, 148
- scanning SQUID microscopy, 452
- search coil, 66
- shielding, magnetic, 356
- shielding, multiple, 358
- shielding factor, 358
- silicon-iron alloys, 330
- skin depth, 58
- Slater-Pauling curve, 314
- soft ferrites, 349
- soft iron, 350
- soft magnetic materials, 96, 325
 - a.c. losses, 326
 - coercivity, 325
 - hysteresis loss, 326
 - permeability, 325
 - saturation magnetization, 326
- solenoid
 - general formula for field of, 27
 - magnetic field

536 *Subject Index*

- of a long thin, 18
- of a short thick, 25
- of a short thin, 24
- optimization of geometry, 26
- power considerations, 26
- specific heat anomalies at critical temperatures, 254
- spin magnetic moment, 264
 - of atom, 283
- spin quantum number, 267
- spin waves, 251
- spontaneous magnetization, 307
 - temperature dependence of, 307
- stability of permanent magnets, 376
- steel, production, 423
- Stern-Gerlach experiment, 278
- Stoner-Slater (electron band) theory of ferromagnetism, 311
- Stoner-Wohlfarth model, 370, 420
- stored energy density, 366
- strain theory of domain-wall pinning, 181
- Street and Woolley model, 211
- stress, effects of, on bulk magnetization, 204
- stress dependent magnetization, 428
- strong magnetic fields, effect on electron coupling, 288
- supermalloy, 337
- susceptibility, 46, 136
 - anomalies at critical temperatures, 254
 - balance, 72
 - demagnetizing corrections, 53
 - differential, 46
- tapes, magnetic recording, 397
- technical saturation magnetization, 46, 148
- temperature dependent paramagnetic susceptibility (Curie), 105, 304
- temperature independent paramagnetic susceptibility (Pauli), 310
- theories of magnetic ordering, 228
- thermal expansion anomalies at critical temperature, 254
- thin-film magnetometers, 80
- thin film recording tapes, 404
- three-d (3d) band electrons, magnetic properties, 313
- time dependent magnetic fields, 17
- torque, 14
 - magnetometer, 72
- torsion balance, 72
- total atomic orbital angular momentum, 284
- track density, 402
- transformers, 98, 329
- transverse magnetostriction, 127
- ultrasonic velocity, field dependence in steels, 433
- units in magnetism, 15
- vector model of the atom, 281
- Verdet's constant, 80
- vibrating coil, 68
 - magnetometer, 68
- vibrating-sample magnetometer, 68
- wall bowing approximation, 173
- wave equation for electromagnetic fields, 18
- wave function of two-electron system, 291
 - including spin, 294
- wave mechanical corrections to angular momentum of electrons, 271
- Weiss domain theory, 137
- Weiss mean field theory, 137
 - consequences of, 227
 - critique of, 227
 - of ferromagnetism, 228
 - of paramagnetism, 225
- wires, magnetic, 346
- X-ray topography, 145
- Zeeman effect
 - anomalous, 277
 - normal, 273
