BRIEF CONTENTS

1	Introduction	1
2	Elements of Heat Transfer for Buildings	23
3	Review of Thermodynamic Processes in Buildings	82
4	Psychrometrics, Comfort, and Health	113
5	Fundamentals of Fluid Mechanics in Building Systems	186
6	Solar Radiation and Windows	230
7	Heating and Cooling Loads	282
8	Annual Energy Consumption and Special Topics	377
9	Heat Generation and Transfer Equipment	433
10	Cooling Equipment	494
11	Secondary Systems for Heating and Cooling	557
12	Heating, Ventilating, and Air Conditioning Control Systems	640
13	Lighting	703
14	Design for Efficiency	729
15	Costs	805
	Appendixes	856
	Credits	863
	Index	867

CONTENTS

About the Authors	x
Preface to Second Edition	xi
Preface to First Edition	xiii

Chapter 1

Introduction 1

1.1 A Bit of History	1
1.2 Importance of Buildings in the U.S. Economy	2
1.3 Role of HVAC Design Engineer	9
1.4 A Note on the Economics of Energy Efficiency	11
1.5 Units and Conversions	14
1.6 Orders of Magnitude	17
Problems	19
References	22

Chapter 2

Elements of Heat Transfer for Buildings 23

2.1 Introduction to Heat Transfer	23
2.2 Conduction Heat Transfer	24
2.3 Convection Heat Transfer	43
2.4 Radiation Heat Transfer	57
2.5 Evaporation and Moisture Transfer	71
2.6 Closure	73
Problems	73
References	80

Chapter 3

Review of Thermodynamic Processes in Buildings 82

3.1 Introduction to Thermodynamics	82
3.2 Thermodynamic Properties	84

3.3 First Law of Thermodynamics	93
3.4 Second Law of Thermodynamics and Thermodynamic Cycles	101
3.5 Summary	106
Problems	107
References	112

Chapter 4

Psychrometrics, Comfort, and Health 113

4.1 Introduction and Definitions	113
4.2 Thermodynamic Fundamentals	114
4.3 The Psychrometric Chart and Tables of Air Properties	122
4.4 Psychrometric Processes for Buildings	133
4.5 Thermal Comfort	147
4.6 Air Quality and Ventilation	158
4.7 Summary	176
Problems	176
References	185

Chapter 5

Fundamentals of Fluid Mechanics in Building Systems 186

5.1 Introduction	186
5.2 Basic Concepts	186
5.3 Pressure Losses in Liquid and Air Systems	191
5.4 Prime Movers	210
5.5 Flow Measurement	217
5.6 Summary	221
Problems	221
References	228

Chapter 6**Solar Radiation and Windows 230**

- 6.1 Solar Geometry 231
- 6.2 Extraterrestrial Insolation 246
- 6.3 Insolation Data and Models 248
- 6.4 Sol-Air Temperature 261
- 6.5 Windows 264
- Problems 276
- References 280

Chapter 7**Heating and Cooling Loads 282**

- 7.1 Air Exchange 283
- 7.2 Principles of Load Calculations 304
- 7.3 Storage Effects and Limits of Static Analysis 314
- 7.4 Zones 317
- 7.5 Heating Loads 321
- 7.6 CLTD/CLF Method for Cooling Loads 322
- 7.7 Transfer Functions for Dynamic Load Calculations 337
- 7.8 New Methods for Load Calculations 355
- 7.9 Summary 366
- Problems 367
- References 375

Chapter 8**Annual Energy Consumption and Special Topics 377**

- 8.1 Annual Consumption 377
- 8.2 Thermal Networks 396
- 8.3 Other Models 404
- 8.4 System Identification 411
- 8.5 Comparison of Calculations with Each Other and with Measured Data 420
- 8.6 Summary of Methods 422
- Problems 424
- References 427

Chapter 9**Heat Generation and Transfer Equipment 433**

- 9.1 Introduction 433
- 9.2 Natural Gas and Fuel Oil-Fired Equipment 434
- 9.3 Electric Resistance Heating 460
- 9.4 Electric Heat Pumps 460
- 9.5 Heat Exchanger Design and Selection 470
- 9.6 Low-Temperature Radiant Heating 478
- 9.7 Solar Heating 480
- 9.8 Cogeneration Definition and Overview 482
- 9.9 Summary 485
- Problems 485
- References 492

Chapter 10**Cooling Equipment 494**

- 10.1 Introduction 494
- 10.2 Rankine Refrigeration Cycle 494
- 10.3 Absorption Cycle 501
- 10.4 Mechanical Cooling Equipment—Chillers 506
- 10.5 Part-Load Performance of Chillers 533
- 10.6 Rules for Chiller System Operation and Control in Commercial Buildings 536
- 10.7 Evaporative Cooling Equipment 537
- 10.8 Summary 549
- Problems 549
- References 555

Chapter 11**Secondary Systems for Heating and Cooling 557**

- 11.1 Air Distribution Systems 558
- 11.2 Piping Design 581
- 11.3 Complete HVAC Systems for Commercial Buildings 591

11.4 HVAC System Design Sizing and Energy Calculations 616

11.5 Summary 631

Problems 631

References 638

Chapter 12

Heating, Ventilating, and Air Conditioning Control Systems 640

12.1 Introduction—The Need for Control 640

12.2 Basic Control Hardware 649

12.3 Basic Control System Design Considerations 659

12.4 Examples of HVAC System Control Systems 672

12.5 Topics in Advanced Control System Design 684

12.6 Summary 696

Problems 696

References 701

Chapter 13

Lighting 703

13.1 Principles of Lighting 703

13.2 Electric Lighting 704

13.3 Principles of Daylighting 709

13.4 Analysis of Daylighting 711

Problems 725

References 728

Chapter 14

Design for Efficiency 729

14.1 The Road to Efficiency 730

14.2 Design Elements and Recommendations 737

14.3 Performance Indices for Heating and Cooling 750

14.4 Measured Performance 758

14.5 Residential Buildings 766

14.6 Commercial Buildings: HVAC Systems 784

14.7 Design for Daylighting 790

Problems 798

References 801

Chapter 15

Costs 805

15.1 Comparing Present and Future Costs 805

15.2 Life Cycle Cost 821

15.3 Economic Evaluation Criteria 832

15.4 Complications of the Decision Process 837

15.5 Cost Estimation 839

15.6 Optimization 843

Problems 846

References 847

Nomenclature 849

Appendixes 856

Credits 863

Index 867

A

- Absolute pressure, 187
- Absorption cooling (AC) cycle, 501–505
 - ammonia systems, 501, 502
 - lithium bromide systems, 501, 502–505
- Absorptivity, 59–60
- AC cycle. *See* Absorption cooling (AC) cycle
- Adiabatic equivalent temperature, 150–151
- Adiabatic mixing of airstreams, 142–144
- Adiabatic saturation
 - evaporative cooling, 141
 - process, 133–135
 - wet-bulb temperature and, 117–121
- Adsorption, air cleaning by, 175
- Advanced control system design, 684–696
- Affinity laws (pumps), 212, 214–215, 581
- AFUE for furnaces, 439–440
- AHRAE Standard 62-1999, *Ventilation for Acceptable Indoor Air Quality*, 163, 168
- Air cleaning
 - filtration (*see* Air filtration)
 - other methods, 175
- Air conditioning
 - absorption cooling (AC), 501–505
 - buildings, 144–147
 - cooling loads (*see* Cooling loads)
 - evaporative coolers (*see* Evaporative coolers)
 - mechanical cooling equipment (*see* Chillers)
 - process, 138–140
 - refrigerants, 90–93, 500–501
 - vapor compression (VC) (*see* Rankine refrigeration cycle)
- Air-cooled condensors, 528–530
- Air diffusers and grilles, 577–581
- Air distribution systems, 558
 - ducts (*see* Ducts and duct fittings)
 - economizers, 560–562
 - fans (*see* Fans)
 - fresh air ventilation rates, 559–560
 - mechanical ventilation basics, 558–562
 - in rooms, 577–581
- Air exchange, 283
 - air leakage (*see* Air leakage)
 - building component correlations, 298–301
 - pressure differences, 290–295
 - rate of, 284–285
- Air filtration, 97–99
 - categories of filters, 171
 - filter efficiency/performance, 171–174
 - filter types, 172
 - system design, 174–175
- Airflow control, 669–672
- Air handler cooling coil, 138
- Air handling unit (AHU), 592
- Air infiltration, 283. *See also* Air exchange
 - CLTD/CLF method for cooling loads, 364
- Air leakage. *See also* Air exchange
 - LBL model, 295–298
 - models for, 285–289
- Air pollution, 8–9. *See also* Indoor air quality
- Air separators, 585, 586
- Air-water systems (commercial buildings), 613–616
- All-air fixed-volume systems, 592–597
 - dual-duct system part-load operation, 600–604
 - outdoor temperature for minimum flow, 597–600
- All-air variable air volume systems. *See* VAV systems
- Ammonia absorption systems, 501, 502
- Analog electronic control system, 653–654
- Anemometers, hot-wire, 220–221
- Annual energy consumption, 377–378
 - balance-point temperature, 378–379
 - bin method (*see* Bin method)
 - degree days (*see* Degree days)
 - dynamic effects, 395–396
 - gas boilers, 455–457
 - normalized annual consumption (NAC), 414
 - solar contribution to, 230
- Annual fuel utilization efficiency (AFUE), 439–440
- Appliances, heat gains from, 332, 363–364
- Architects, role of, 9
- ASHRAE comfort chart, 153–158
- ASHRAE transfer function method
 - conductive heat gains, 339–342
 - constant temperature, load at, 342–349
 - ground coupling, 35–41

ASHRAE transfer function method—*Cont.*
 steps, 338
 variable indoor temperature and heat extraction
 rate, 349–355
 Automatic control systems. *See* Control systems

B

Backward-curved blading (fans), 563
 Balance-point temperature T_{bal} , 378–379
 Ballast, 705–706
 Baseboard heaters, 473–474
 Basement furnace, 434, 437
 Basement heat loss, 37–38, 41, 42
 Beam radiation, 248
 Bin method, 390–395
 evaporative cooler performance calculations,
 546–549
 seasonal heat pump performance, 466–470
 secondary systems, 621–627
 VAV systems, 622–627
 BLAST, 316, 420
 Blower door, 284
 “Blow-through” systems, 568
 Boiler reset system, 446
 Boilers, 441–443
 auxiliary steam heat, 446–450
 combustion calculation, 450–451
 design and selection, 444–446
 efficiency, 452–457
 flue gas analysis, 451–452
 Building design, 9
 process, 10–11
 Building heat transmission coefficient, 305–309
 Building rates and costs, 2–3
 Buried pipe, heat loss from, 32–33

C

Candela (cd), 704
 Carbon dioxide (CO_2), 158
 Carbon monoxide (CO), 159
 Carnot cycle, 101–102
 refrigeration cycle, 102–104
 Carnot heat pump, 104, 461, 463, 464
 Ceiling radiant heating, 478–480
 Centrifugal compressors, 512–514
 rotational speed, 514–515
 CFCs (chlorinated and fluorinated hydrocarbons),
 90–91
 Chemical air cleaning, 175
 Chilled water
 control valves, 666
 piping design, 587

Chillers, 506
 air-cooled condensers, 528–530
 commercial building operation and control, 536
 compressors (*see* Compressors)
 cooling towers (*see* Cooling towers)
 evaporators, 530
 expansion devices, 530–532
 part-load performance, 533–536
 unitary equipment, 532–533
 Chlorinated and fluorinated hydrocarbons (CFCs),
 90–91
 CHP systems. *See* Combined heat and power
 (CHP) systems
 Cleaning of air
 filtration (*see* Air filtration)
 other methods, 175
 Clearness index
 daily, 255
 hourly, 249
 Clear sky radiation, 252–255
 Closed-loop system, 641
 Closed thermodynamic system, 93–95
 CLTD/CLF method for cooling loads,
 322–336
 CLTD/SCL/CLF method for cooling loads,
 355–364
 Coal, 434
 Coefficient of performance (COP), 12
 Carnot heat pump, 102–104, 461, 463, 464
 Cogeneration systems. *See* Combined heat and
 power (CHP) systems
 Cold, dry air, warming and humidification of,
 135–138
 Combined heat and power (CHP) systems,
 482–483
 available technologies, 483, 484
 efficiency, 484
 typical CHP applications, 483
 Combined-mode heat transfer, 65–69
 Comfort, 147–158
 Complete secondary systems for buildings,
 591–592
 air-water systems, 613–616
 all-air fixed-volume (*see* All-air fixed-volume
 systems)
 all-air variable air volume (*see* VAV systems)
 Complete system control, 678–681
 Compressors, 506–507
 centrifugal, 512–515
 reciprocating, 508–512
 rotary, 517–518
 screw, 515–516
 scroll, 516–517
 vapor compressor analysis, 507–508

- Condensing furnace, 440–441
- Condensors, air-cooled, 528–530
- Conduction heat transfer
 - ASHRAE calculation method (*see* ASHRAE transfer function method)
 - building heat transmission coefficient, 305–309
 - exchangers (*see* Heat exchangers)
 - Fourier's law, 24–25
 - ground coupling (*see* Ground coupling)
 - RTS (radiant time-series) calculation method, 364–365
 - steady conduction (*see* Steady conduction)
 - thermal conductivity, 33–35
 - windows, 329–330
- Constant-velocity duct design, 574
- Construction rates and costs, 2–3
- Control diagram, 642, 643
- Control systems, 640–642
 - advanced control system design, 684–696
 - airflow control, 669–672
 - complete systems, 678–681
 - control constants, selection of, 691–693
 - cooling control, 676–678
 - derivative control, 648–649
 - design considerations, 659–672
 - electrical control system, 682–684
 - electronic systems, 653–659
 - feedback control modes, 642–649
 - hardware, 649–659
 - heating coil control simulation, 693–696
 - heating control, 674–676
 - integral control, 647–648
 - ladder diagram, 682–684
 - Laplace transforms, 684–688
 - outside air control, 672–674
 - pneumatic systems, 649–653
 - primary system equipment, 681
 - proportional control, 644, 645–647
 - proportional controller stability, 690–691
 - second-order controller stability, 689–690
 - smoke control, 681–682
 - stability, 688–691
 - steam and liquid flow control, 660–669
 - two-position control, 642, 644
- Convection coefficients
 - external flow equations, 45–48
 - internal flow equations, 48–49
 - tables and graphs, 49–51
 - typical values, 44
- Convection heat transfer
 - coefficients (*see* Convection coefficients)
 - h_{con} , equation for, 43–44
 - low-temperature radiant heating, 478–480
 - RTS (radiant time-series) calculation method, 365–366
 - thermal resistance and R value, 45
 - wall R value and, 66–67
- Conversion of units, 15
- Cooling control, 676–678
- Cooling cycles/process
 - absorption cooling (AC), 501–505
 - evaporative cooler process, 141–142
 - vapor compression (VC) (*see* Rankine refrigeration cycle)
- Cooling equipment, 494
 - evaporative (*see* Evaporative coolers)
 - mechanical (*see* Chillers)
- Cooling loads. *See also* Loads
 - CLTD/CLF method, 322–336
 - CLTD/SCL/CLF method, 355–364
- Cooling towers, 518–519
 - capacity, 526
 - design and part-load operation, 523–526
 - energy balance, 519–522
 - heat exchangers, 522–523
 - induced-draft, 519
 - maintenance, 527–528
 - mechanical draft, 519
 - tower cooling, 526–527
- COP. *See* Coefficient of performance (COP)
- Costs
 - building costs, 3
 - energy costs (*see* Energy costs)
 - HVAC equipment, 10
- Counterflow heat exchangers, 53–57
- Curtain wall air exchange, 300, 302

D

- Damper leakage, 670–671
- Dampers, 669–672
- Daylighting
 - analysis of, 711–725
 - daylight data, 712–715
 - design types, 709–710
 - principles of, 709–710
 - sidelighting, 720–725
 - toplighting, 715–720
- Daylight savings time (DST), 232
- DDC (direct digital control) systems, 654–659
- Degree days, 379–388
 - variable base, model with, 388–390
- Density of fluids, 188
- Derivative control, 648–649
- Dew point temperature T_{dew} , 114, 121
- Diesel engines (CHP systems), 483, 484
- Diffuse radiation, 248

- Direct digital control (DDC) systems, 654–659
 - Direct evaporative coolers, 537–542
 - Direct illuminance, 712–715
 - Direct radiation, 248
 - Disk traps, 446
 - Diversity, 444
 - DOE 2.1, 338, 420, 712
 - Door air exchange, 298–301
 - Doppler-type devices, 217
 - Downflow furnace, 434, 436
 - Driving term(s), response to, 337
 - Dry-bulb temperature T_d , 114
 - relative humidity, calculation of, 120–121
 - DST (daylight savings time), 232
 - Duct design, 571
 - constant-velocity, 574
 - equal friction, 573, 574–577
 - high-velocity systems, 571–573
 - low-velocity systems, 571–573
 - static regain, 573
 - velocity reduction, 573–574
 - Ducts and duct fittings
 - air diffusers and grilles, 577–581
 - design (*see* Duct design)
 - dual-duct system part-load operation, 600–604
 - effective duct length, 565
 - fluid pressure losses in, 203–210
 - Dynamic inverse models, 417–418
- E**
- E_b (total blackbody emissive power), 57
 - Economics of energy efficiency, 11–14
 - Economizer cycle, 560
 - all-air fixed-volume systems, 596
 - Economizers, 99–101
 - air distribution systems, 560–562
 - Effective heat capacity C_{eff} , 314
 - Effective temperature ET^* , 151
 - Electric heat pumps. *See* Heat pumps
 - Electric lighting, 704–708
 - Electric resistance heating, 460
 - Electrical control system, 682–684
 - Electrical engineer, role of, 9
 - Electronic air cleaners, 171
 - Electronic control systems, 653–659
 - Embedded energy, 14
 - Emissivity, 58
 - Energy conservation
 - programs, evaluation of, 414
 - thermodynamics, first law of, 93–101
 - thermodynamics, second law of, 101–106
 - Energy consumption, 4–8
 - annual (*see* Annual energy consumption)
 - boilers, 454–457
 - calculation and measured data comparisons, 420–422
 - degree days (*see* Degree days)
 - inverse models (*see* Inverse models)
 - summary of calculation methods, 422–424
 - thermal networks (*see* Thermal networks)
 - Energy costs, 3, 8
 - energy efficiency and, 11–14
 - Energy efficiency
 - air filtration, 171–174
 - boilers, 452–457
 - combined heat and power (CHP) systems, 484
 - economics of, 11–14
 - furnaces, 439–441
 - Energy management, 415
 - Energy signature, 412
 - Enthalpy-humidity ratio, 137
 - Enthalpy of moist air, 121–122
 - economizer, 560, 561–562
 - log mean, 476
 - psychometrics chart, 124, 125, 127
 - saturated air, 476
 - Environmental considerations, 8–9
 - Equal friction duct design, 573, 574–577
 - Equal-percentage valves, 660–662
 - Equinoxes, 236
 - Equipment, heat gains from, 332, 363–364
 - Equivalent diameter of friction, 205
 - Evaporation of moisture, 71–73
 - Evaporative condensers, 529–530
 - Evaporative coolers, 537
 - design considerations, 545–549
 - direct, 537–542
 - indirect, 542–545
 - process, 141–142
 - Evaporators, 530
 - Excess air fraction $f_{exc \text{ air}}$, 450–451
 - Exchange, air. *See* Air exchange
 - Exchangers. *See* Heat exchangers
 - Expansion devices (chillers), 530–532
 - Expansion tanks
 - boilers, 450
 - closed *versus* open systems, 589
 - pressurizing, 586
 - sizing, 585–586
 - External flows, 45–48
 - Extraterrestrial insolation, 246–248
- F**
- Face and bypass dampers, 671, 672
 - Fan inlet vanes, 568
 - Fan laws, 212–214
 - Fan operating point, 566–568
 - Fan outlet dampers, 568

Fans, 562
 fixed-speed operation, 562–568
 fluid mechanics, 210–216
 variable-volume operation, 568–571
 VAV mixing boxes, 607–610

Feedback system, 641

Fibrous media unit filter, 171

Filtration of air. *See* Air filtration

Fire and smoke control, 681–682

Fire-tube boilers, 443

Fixed-volume system, 594

Floors
 basement floor heat loss, 38
 radiant heating, 478–480

Flow-through valves, 660

Flue gas analysis, 451–452

Fluid flow measurement, 217–221

Fluid mechanics, 186
 flow measurement, 217–221
 motion, equation of, 189–190
 prime movers, 210–216

Fluid pressure, 187–188
 ducts and duct fittings, losses in, 203–210
 pipes and pipe fittings, losses in, 191–203

Fluid properties, 188–189

Fluorescent lamps, 705

Footcandle (fc), 704

Forced convection, 44
 turbulent air flow through ducts and pipes, 44
 turbulent water flow through pipes, 44

Forward-curved blading (fans), 210, 562–563

Forward problem, 411

Foundation heat gain/loss, 418–420

Fourier's law, 24–25

Free convection, 43
 hot roofs, 46, 47–48
 laminar, 45–46
 turbulent, 46–47

Fresh air ventilation rates, 559–560

Friction
 equal friction duct design, 573, 574–577
 equivalent diameter of, 205
 fluid pressure in ducts, 205–209
 fluid pressure in pipes, 191–192, 194, 197–200

Fuel, 434

Fuel oil, 434

Furnaces, 434–437
 design and selection, 437–439
 efficiency, 439–441

G

Gas
 ideal gas, 84–87
 natural gas, 434

Gaseous discharge lamps, 705, 706

Gas turbines (CHP systems), 483, 484

Gauge pressure, 187

Glare, 704

Glass
 CLTD values, 356, 357
 glazing (*see* Glazing)
 sunlit glass at 36° north latitude for July, SCL
 for, 360
 windows (*see* Windows)

Glazing
 high-performance, 273–276
 shading coefficient, 270–273
 surface temperature, 269
