Ship stability
for masters and mates

by D. R. Derrett
M.I.N., Extra Master

LONDON: THE MARITIME PRESS LIMITED
## Contents

### Part One

1. Forces and moments  
2. Centroids and the centre of gravity  
3. Density and specific gravity  
4. Laws of flotation  
5. Effect of density on draft and displacement  
6. Transverse statical stability  
7. Effect of free surface of liquids on stability  
8. TPC and displacement curves  
9. Form coefficients  

### Part Two

10. Simpson's rules for areas and centroids  
11. Final KG  
12. Calculating KB, BM, and metacentric diagrams  
13. List  
14. Moments of statical stability  
15. Trim  
16. Stability and hydrostatic curves  
17. Increase in draft due to list  
18. Water pressure  
19. Combined list and trim  
20. Calculating the effect of free surface of liquids  
21. Bilging and permeability  

### Part Three

22. Dynamical stability  
23. Effect of beam and freeboard on stability  
24. Angle of loll  
25. True mean draft
The inclining experiment
Effect of trim on tank soundings
Drydocking and grounding

Part Four
Second moments of areas
Pressure and thrust. Centres of pressure
Metacentric height at the angle of loll
Heel due to turning
Unresisted rolling in still water
List due to bilging
Radial integration by Simpson's rules
Launching
Effect of density on trim
List with zero metacentric height
Tchebycheff's rules

Part Five
Shear force and bending moments
Aids to stability and seaworthiness

Appendices
Extracts from the M.S. (Load Line) Rules, 1968
Summary of stability formulae
Standard abbreviations and symbols
Examinations syllabuses
Conversion tables
Specimen papers
Answers to exercises
Index
Density of fresh water .......... 3
of salt water .......... 3
Diagrams, bending moments .......... 309
weight and load .......... 322
shear force .......... 309
Displacement curves .......... 54
Dock water allowance .......... 36
Draft, change due to trim .......... 133
effect of change of density .......... 289
increase due to list .......... 170
when launching .......... 286
Dry docking .......... 227
Dynamical Stability, Definitions .......... 204
Moseley's FormulA .......... 205

Effect of:
beam & freeboard on stability .......... 210
bilging on stability .......... 200
change of density .......... 289
dry docking on stability .......... 227
free surface .......... 182
trim on tank soundings .......... 224
Equilibrium, Neutral .......... 44
Stable .......... 43
Unstable .......... 44

Exercises:
1. Forces and moments .......... 8
2. Centroids and the centre of gravity .......... 18
3. Density and Specific Gravity .......... 21
4. Laws of flotation .......... 31
5. Effect of density on draft & displacement .......... 39
6. Transverse stability .......... 46
7. Free surface effect .......... 51
8. TPC and displacement curves .......... 56
9. Form coefficients .......... 62
10. Simpson's Rules .......... 87
11. Final KG .......... 92
12. KB, BM, and metacentric diagrams .......... 108
13. List .......... 116
14. Moments of statical stability .......... 126
15. Trim .......... 151
16. Stability and Hydrostatic curves .......... 169
17. Increase in draft due to list .......... 173
18. Water pressure .......... 177
19. Combined list and trim .......... 181
20. Free surface effect of liquids .......... 189
22. Dynamical stability .......... 209
23. Angle of loll .......... 215
24. True mean draft .......... 219
25. The inclining experiment .......... 223
26. Effect of trim on tank soundings .......... 226
27. Dry docking .......... 235
28. Second moments of areas .......... 243
29. Pressure and thrust, centres of pressure .......... 255
30. Metacentric height at the angle of loll .......... 260
31. Heel due to turning .......... 263
32. Unresisted rolling in still water .......... 269
33. List due to bilging .......... 275
34. Radial Integration by Simpson's Rules .......... 282
35. Launching .......... 288
36. Effect of density on trim .......... 292
37. List with zero metacentric height .......... 295
38. Chebyshev's Rules .......... 302
39. Shear force and bending moments .......... 341

Final KG .......... 89
First Rule, Simpson's .......... 63
Flotation, centre of, by Simpson's Rules .......... 79
Force, of buoyancy .......... 22
resultant .......... 1
Forces, and moments .......... 1
resolution of .......... 1
Form coefficients .......... 58
Free surface effect .......... 47
Freeboard, effect on stability .......... 210
Freely supported beams .......... 313
Fresh water allowance .......... 34

GM .......... 43, 119
at the angle of loll .......... 256
by inclining test .......... 220
effect of dry docking .......... 227
from stability curves .......... 163
list with zero GM .......... 293
virtual loss due to free surface .......... 182
Gotaverken's Lodicator .......... 350
Gravity, specific .......... 19
Grounding .......... 227
GZ curves .......... 156
effect of bilging .......... 201
for M.V. Tanker .......... 157

Harmonic Motion .......... 264
Heel, definition of .......... 41
due to turning .......... 261
Height of the Metacentre .......... 43
Hogging .......... 321
Homogeneous logs .......... 29
Hydrometer .......... 23
Hydrostatic curves .......... 166
for M.V. Tanker .......... 167

Inclining Experiment .......... 220
Increase in draft due to list .......... 170
Inertia, mass moment of .......... 265
Initial metacentric height .......... 119, 163
Initial metacentre .......... 119
Intermediate ordinates .......... 75

INDEX 395

Simpson's Rules, centroids ........................................ 79
radial integration ............................................... 276
volumes ................................................................. 72
Specific gravity ........................................................ 3
Sperry/Sintef .......................................................... 347
Stable equilibrium .................................................. 43
Stability, and trim indicator ..................................... 355
cross curves ......................................................... 156
for M.V. Tanker ..................................................... 157
dynamical ............................................................... 204
effect of beam ........................................................ 210
effect of bilging ....................................................... 200
Stability, effect of freeboard ................................... 210
range of ..................................................................... 103
Statistical stability, curves ......................................... 162
moment of .................................................................. 43, 118
transverse ................................................................. 41
Stern lifting ................................................................. 285
Strength of ship ........................................................ 303
Stress finders .............................................................. 342
Stresses ................................................................. 303
bending ................................................................. 329
complementary ......................................................... 306
hogging ................................................................. 321
longitudinal, in still water ......................................... 318
in waves ................................................................. 320
sagging ................................................................. 322
shearing .......................................................... 304, 329, 335
tensile and compressive ........................................... 303
TANK SOUNDINGS, effect of trim .......................... 224
Tchebycheff's Rules .................................................. 296
Tender and stiff ships ................................................. 43, 119
Tensile and compressive stresses .............................. 303
Theorem of parallel axes .......................................... 238
Third rule, Simpson's .............................................. 66
Thrust, and pressure ............................................... 244
total ................................................................. 244
resultant .............................................................. 244
Tipping centre ........................................................ 129
Tipping ................................................................. 283

Tonnes per centimetre immersion .......................... 25
curves ................................................................. 52
Transverse, BM ........................................................ 97
statistical stability ................................................... 41
Triangular prisms, BM ............................................. 100
KB ................................................................. 94
Trim ................................................................. 15
and list ................................................................. 178
change of draft due to ........................................... 133
due to bilging ........................................................ 195
effect of discharging weights ................................... 136
effect of loading weights .......................................... 136
effect of shifting weights .......................................... 134
effect on tank soundings ........................................ 224
moment ................................................................. 128
to find the centre of flotation ................................... 143
to find the longitudinal GM ..................................... 148
to keep a constant draft aft ....................................... 144
to produce a required draft aft .................................. 146
True mean draft ....................................................... 216
Turning, heel due to ............................................... 261
UNRESISTED rolling in still water .......................... 264
Unstable equilibrium ............................................... 44
correction of ........................................................ 44
VANISHING STABILITY, angle of .............................. 163
Variable immersion hydrometer ............................. 23
Virtual loss of GM, due to free surface .................. 182
due to drydocking 227
Volumes, of ship shapes ......................................... 72
WALL-SIDED FORMULA ........................................... 120
Waterplane, Areas and second moments ................. 239
coefficient ............................................................ 58
Water pressure ......................................................... 174
Weight, and mass .................................................. 6
diagrams ............................................................. 322
ZERO GM, list due to .............................................. 293
