Preface

xiv

Part 1	Quantitative information	1
	Introduction	1
	The questionnaire	3
	The coding sheet	4
	Visit the website	5
	<i>Quick start: Quantitative information</i>	6
Chapter 1	The quantitative approach	7
	Objectives	7
	1.1 Problem solving	8
	1.2 Methodology	12
	1.3 Models	15
	1.4 Measurement	22
	1.5 Scoring models	24
	1.6 Conclusions	27
	1.7 Problems	28
Chapter 2	Managing data	31
	Objectives	32
	2.1 Issues of data collection	33
	2.2 Published sources	35
	2.3 Internet sources	37
	2.4 A census or a sample?	38
	2.5 Market research	40
	2.6 Conclusions	41
	2.7 Problems	42
Chapter 3	Survey methods	44
	Objectives	45
	3.1 Probability sampling	45
	3.2 Non-probability sampling	49

3.3	Survey design	53
3.4	Questionnaire design	58
3.5	Non-response	63
3.6	Conclusions	64
3.7	Problems	64
Chapter 4	Presentation of data	67
	Objectives	67
4.1	Raw data	68
4.2	Tabulation of data	69
4.3	Visual presentation	74
4.4	Presentation of continuous data	83
4.5	Graphical representation	85
4.6	Conclusions	90
4.7	Problems	91
	<i>Part 1 Conclusions</i>	96
Part 2	Descriptive statistics	99
	Introduction	99
	<i>Quick start: Descriptive statistics</i>	101
Chapter 5	Measures of location	103
	Objectives	104
5.1	The mean, median and mode	104
5.2	Other measures of location	115
5.3	Conclusions	117
5.4	Problems	118
Chapter 6	Measures of dispersion	123
	Objectives	124
6.1	The standard deviation	124
6.2	Other measures of dispersion	130
6.3	Relative measures of dispersion	135
6.4	Variability in sample data	136
6.5	Conclusions	138
6.6	Problems	139
6.7	Appendix	144

Chapter 7 Index numbers 145

Objectives	145
7.1 The interpretation of an index number	146
7.2 The construction of index numbers	151
7.3 The weighting of index numbers	156
7.4 The Retail Prices Index	158
7.5 Conclusions	162
7.6 Problems	162
<i>Part 2 Conclusions</i>	<i>166</i>

Part 3 Measuring uncertainty 167

Introduction	167
Organization of Part 3	168
<i>Quick start: Measuring uncertainty</i>	<i>169</i>

Chapter 8 Probability 171

Objectives	171
8.1 Basic concepts	172
8.2 Definitions	175
8.3 Basic relationships in probability	178
8.4 Probability trees	181
8.5 Expected values	183
8.6 Decision trees	185
8.7 Bayes' theorem	188
8.8 Markov chains	190
8.9 Conclusions	193
8.10 Problems	194

Chapter 9 Discrete probability distributions 203

Objectives	203
9.1 Uniform distribution	204
9.2 Binomial distribution	206
9.3 Poisson distribution	214
9.4 Poisson approximation to the binomial	216
9.5 Conclusions	217
9.6 Problems	217

Chapter 10	The Normal distribution	220
	Objectives	221
	10.1 Characteristics of the Normal distribution	221
	10.2 The standard Normal distribution	222
	10.3 Combinations of variables	226
	10.4 Central limit theorem	227
	10.5 Normal approximations	231
	10.6 Conclusions	234
	10.7 Problems	234
	<i>Part 3 Conclusions</i>	237
Part 4	Statistical inference	239
	Introduction	239
	<i>Quick start: Inference quick start</i>	243
Chapter 11	Confidence intervals	245
	Objectives	245
	11.1 Statistical inference	246
	11.2 Inference about a population	248
	11.3 Confidence interval for the population mean	250
	11.4 Confidence interval for a population percentage	257
	11.5 The difference between independent samples	260
	11.6 The finite population correction factor	263
	11.7 The <i>t</i> -distribution	265
	11.8 Confidence interval for the median – large sample approximation	269
	11.9 Conclusions	270
	11.10 Problems	271
Chapter 12	Significance testing	275
	Objectives	276
	12.1 Significance testing using confidence intervals	277
	12.2 Hypothesis testing for single samples	278
	12.3 One-sided significance tests	283
	12.4 Types of error	287
	12.5 Hypothesis testing with two samples	290
	12.6 Hypothesis testing with small samples	293
	12.7 Conclusions	297
	12.8 Problems	298

Chapter 13	Non-parametric tests	301
	Objectives	301
	13.1 Chi-squared tests	302
	13.2 Mann-Whitney U test	315
	13.3 Wilcoxon test	318
	13.4 Runs test	321
	13.5 Conclusions	322
	13.6 Problems	323
	<i>Part 4 Conclusions</i>	329
Part 5	Relating variables and predicting outcomes	331
	<i>Quick start: Relating variables and predicting outcomes</i>	333
Chapter 14	Time series	335
	Objectives	336
	14.1 Time series models	337
	14.2 The trend	340
	14.3 The seasonal factors	348
	14.4 The cyclical factors	353
	14.5 The residual or random factor	354
	14.6 Predictions	356
	14.7 Exponentially weighted moving averages	357
	14.8 Summary and conclusions	360
	14.9 Problems	361
Chapter 15	Correlation	365
	Objectives	366
	15.1 Scatter diagrams	366
	15.2 Cause and effect relationships	368
	15.3 Measuring linear association	371
	15.4 The coefficient of determination	376
	15.5 Measuring non-linear association	377
	15.6 Testing the significance of the correlation	380
	15.7 Conclusions	382
	15.8 Problems	383
	15.9 Derivation of the correlation coefficient	388
	15.10 Algebraic link between Spearman's and Pearson's coefficients	388

Chapter 16	Regression	390
	Objectives	390
	16.1 Linear regression	391
	16.2 The graph of the regression line	393
	16.3 Predictions from the regression line	394
	16.4 Another regression line	398
	16.5 Interpretation	400
	16.6 Non-linear relationships	401
	16.7 Conclusions	402
	16.8 Problems	402
	16.9 Appendix	406
Chapter 17	Multiple regression and correlation	409
	Objectives	410
	17.1 The basic two-variable model	411
	17.2 The effects of adding variables	413
	17.3 Assumptions and econometric problems	416
	17.4 Analysis of a multiple regression model	421
	17.5 Using multiple regression models	424
	17.6 Conclusions	425
	17.7 Problems	425
	<i>Part 5 Conclusions</i>	432
Part 6	Modelling	435
	Introduction	435
Chapter 18	The time value of money	437
	Objectives	438
	18.1 Interest: simple and compound	438
	18.2 Depreciation	441
	18.3 Present value	442
	18.4 The internal rate of return	445
	18.5 Incremental payments	449
	18.6 Annual percentage rate (APR)	451
	18.7 Conclusions	453
	18.8 Problems	454
	18.9 Appendix	456

Chapter 19	Linear programming	457
	Objectives	457
	19.1 Definition of a feasible area	458
	19.2 The solution of a linear programming problem	460
	19.3 Special cases	466
	19.4 The value of resources	468
	19.5 Computer-based solutions	470
	19.6 Conclusions	477
	19.7 Problems	478
Chapter 20	Networks	483
	Objectives	483
	20.1 Notation and construction	484
	20.2 The critical path	487
	20.3 Measures of float	490
	20.4 Gantt charts and managing resources	491
	20.5 Project time reduction	493
	20.6 Uncertainty	496
	20.7 Computer-based solutions to network problems	497
	20.8 Conclusions	509
	20.9 Problems	509
Chapter 21	Modelling stock control and queues	514
	Objectives	514
	21.1 Introduction to the economic order quantity model	515
	21.2 Quantity discounts	519
	21.3 Non-zero lead time	520
	21.4 Introduction to modelling queues	523
	21.5 A model for a single queue	524
	21.6 Queues – modelling cost	526
	21.7 Modelling multi-channel queues	528
	21.8 Conclusions	530
	21.9 Problems	530
	21.10 Appendix – proof of EBO	532
Chapter 22	Simulation	533
	Objectives	534
	22.1 An introduction to simulation models	534
	22.2 Developing a simple simulation model	535
	22.3 Random event generation	537

22.4	The construction of a simulation model	540
22.5	Building a simulation model using a spreadsheet	542
22.6	Conclusions	544
22.7	Problems	544
	<i>Part 6 Conclusions</i>	546

Part 7	Mathematical background	547
---------------	--------------------------------	------------

	Introduction	547
--	--------------	-----

Chapter 23	Mathematical relationships	549
-------------------	-----------------------------------	------------

	Objectives	550
23.1	Introduction to algebra	550
23.2	Powers	553
23.3	Arithmetic and geometric progressions	554
23.4	Functions	557
23.5	Conclusions	572
23.6	Problems	572
23.7	Proof of AP	574
23.8	Proof of GP	575
23.9	Proof of quadratic formula	575

Chapter 24	Matrices	576
-------------------	-----------------	------------

	Objectives	577
24.1	What is a matrix?	577
24.2	Matrix manipulation	578
24.3	Solutions of simultaneous equations	586
24.4	Leontief input-output analysis	589
24.5	Conclusions	592
24.6	Problems	592

Chapter 25	Use of calculus	596
-------------------	------------------------	------------

	Objectives	597
25.1	Differentiation	597
25.2	Economic applications I	603
25.3	Turning points	606
25.4	Economic applications II	609
25.5	Further notes	610
25.6	Integration	613

25.7	Economic summary	616
25.8	Functions of more than one variable	617
25.9	Maximization and minimization subject to constraints	620
25.10	Conclusions	623
25.11	Problems	623
	<i>Part 7 Conclusions</i>	628

Appendices**629**

A	Cumulative binomial probabilities	631
B	Cumulative Poisson probabilities	632
C	Areas in the right-hand tail of the Normal distribution	633
D	Student's t critical points	635
E	χ^2 critical values	636
F	Present value factors	638
G	Mann–Whitney test statistic	640
H	Wilcoxon test statistic	643
I	Runs test	644
J	Durbin–Watson statistic	646
K	Random number table	648
	Answers	649
	Index	677

Index

- 5W & H 33
- Absorbant state 191
- Accuracy 40
- Activities 483, 484
- Activity on arrow 484, 485
- Activity on node 484
- Adding variables 226
- Adding variances 261
- Addition of matrices 578
- Additive model 338, 249, 338, 349, 355, 357
- Additive scoring model 25
- Adjunct matrix 584
- Adjusted R^2 412
- Admap 36
- Aggregate index 152
- Algebra 550ff.
- Alternative hypothesis 278, 279, 283, 286, 304, 316, 319, 322
- Analogue model 17, 433
- Analysis 2, 16, 99
- Analytical model 20, 21
- Annual Abstract of Statistics 36
- Annual percentage rate (APR) 451
- Annuities 450
- Arithmetic mean 104
- Arithmetic progression 554, 574
- Array 557
- Association 303, 371
- Assumption 6, 18
- Attitude scale 71
- Autocorrelation 418ff., 421, 424
- Automatic interaction detection technique 137
- Average 20, 174, 183, 350
- Average arrival rate 524
- Average cost 604
- Average price relative index 153
- Average revenue 604, 605, 616
- Average service rate 524
- Average stock level 515
- Axiomatic definition, probability 177, 178
- Bar charts 22, 76ff., 81, 204, 205, 213
- Baseyear 146 147 154
- Base-weighted index 1 54
- Basket of goods 147, 153, 156, 159
- Bayes' theorem 188ff.
- Best fit 392
- Beta distribution 496
- Bias 6, 31, 32, 38, 39, 44, 49, 52, 54, 58, 61, 245
- Binomial distribution 169, 206ff., 236, 231, 269, 311, 538
- Brainstorm 11
- Break-even 16, 21, 225, 550
- Business significance 138, 151, 247, 281
- Calculus 596ff.
- Capital recovery factor 451
- Cardinal data 104, 371, 373, 376, 390
- Categorical data 22.23, 104, 297
- Cause and effect 35, 367, 368ff., 380
- Census 6, 34, 36, 38, 39, 239, 245, 247, 263
- Census of Population 50
- Central Limit Theorem 227ff., 243, 246, 251, 252, 257, 263
- Central Statistical Office (CSO) 35
- Centred trend 346
- Centred four-point moving average trend 346
- Chance 167, 171
- Chi-squared 174, 243, 302ff.
- Checklists 53
- Classical definition, probability 175
- Clustering algorithms 136ff.
- Clusters 48
- Cobb-Douglas production function 622
- Coding 58, 60
- Coefficient 560
- Coefficient of correlation 371
- Coefficient of determination 376, 412, 413
- Coefficient of skewness 135
- Coefficient of variation 135
- Cofactors 583
- Column vector 577
- Combinations 210
- Combinations of variables 226ff.
- Common difference 554
- Common ratio 556
- Commutative 579
- Complexity 16
- Component bar chart 76ff.
- Compound interest 439ff.
- Computers 20
- Computational model 20
- Conditional probability 180
- Confidence interval 243, 245ff., 251, 254, 257, 261, 262, 266, 275, 277, 394, 396, 413, 497
- Confidence interval for a percentage 257
- Confidence interval for the mean 250ff.
- Confidence interval for the median 269
- Confidence interval for difference of means 261
- Confidence interval for difference of percentages 262
- Confidence level 247, 381
- Confidence limits 413
- Conformable for addition 578
- Conformable for multiplication 580
- Constant function 558
- Constraint 458, 460
- Consumers risk 287
- Continuous data 24, 74, 83ff., 104, 110, 127
- Continuous distribution 220
- Continuous probability distributions
- Contribution to profit 552
- Controllable variable 390, 534
- Convenience sampling 52

- 333, 365ff., 390, 416
 matrix 418
 587
 on 493, 495
 path 483, 487ff., 494,
 504
 Critical value 279, 284
 Cross tabulation 51, 74, 173, 303
 Cubic function 570
 Current-weighted index 154
 Cyclical factor 338, 351, 353ff.
- Data 1, 6, 22, 31, 32, 34, 38, 44,
 67ff.
 Database 38
 Data collection 34
 DataStream 37
 Decision making 25, 27, 186
 Decision trees 185ff.
 Deductive 14
 Definite integration 615
 Degrees of freedom 265, 304
 Delivery and collection 56
 Delphi technique 177
 Demand function 562, 604
 Dependent events 1 82
 Dependent variable 88
 Depreciation 441ff.
 Derivative 600
 Descriptive statistics 15, 99,
 103ff.
 Deseasonalized data 357
 Desk research 1, 13, 35
 Determinant of a matrix 583
 Deterministic model 17, 19
 Deterministic relationship 167,
 171, 367
 Detrended data 357
 Diagrams 67ff.
 Diaries 56
 Dichotomous variable 206
 Difference between independent
 samples 260
 Difference of means 291ff.
 Difference of percentages 292
 Differentiation 597ff.
 Directed graph 190
 Discounting 443
 Discounts 519
 Discount rate 444
 Discrete data 24, 72, 74, 76ff.,
 104, 108, 126, 127
 Discrete distribution 294ff.
- Discrete probability distributions
 203ff.
 Dispersion 123ff.
 Distribution of sample means 25 1
 Disturbance term 416, 418
 Domain 558
 Doughnut 82
 Dummy activity 484, 486
 Dummy variable 341
 Duration of project 488
 Durbin-Watson test 418
- Earliest starting time (EST) 487,
 488
 Econometrics 416
 Economic batch quantity (EBQ)
 515
 Economic order quantity (EOQ)
 515ff.
 Economic Trends 36
 Elasticity of demand 605
 Electoral Register 46, 47, 49
 Elements of a matrix 577
 E-mail 56
 Endogenous variable 400
 Equality of matrices 578
 Equally likely 19, 175
 Equations 390, 557ff.
 Equilibrium 562
 Error, type of 287
 Estimate 110
 Estimator 254
 Euler's constant 570
