INDEX.

Marks comprising two or more letters are indexed under the first letter of the pair or group. Marks composed of intertwined letters are indexed under each letter appearing in the monogram. Devices where accompanied by initials are indexed under the first initial letter.

Marks consisting of devices difficult to identify by a short description, will be found in *facsimile* at the end of the index.

Every maker's mark contained in this book is indexed alphabetically. By referring to the indicated page the mark will be found illustrated in *facsimile*. In every ascertained case the name of the maker is connected with his mark, and where marks consist of or comprise initials the names to which they pertain are, by means of their initials, indexed also. Those goldsmiths' names which are printed in chronological order under their respective local headings, and occupy over a hundred pages of the book, are not repeated in this index, because the repetition of those surnames in alphabetical order would—except for the very short period when the Britannia standard was enforced in England—afford no help either to the plate collector or the dealer. As explained on page 236 *ante*, the manner in which the names are printed in the lists—the initials being in line vertically, with a clear space before the first letter of the surname—facilitates the finding of any particular name. The increase in the bulk of the book, which would have been caused by the repetition of about twelve thousand names has therefore been avoided.

The lists of goldsmiths' names will be found indexed under the names of the towns to which they respectively pertain.
