# Acknowledgments

While mine is the name on the cover, it took a lot of people to make this book happen. CMP Books' Dorothy Cox and Paul Temme helped develop the concept for the first edition, letting me cover every concept I considered important. Dave Moulton (a Grammy-nominated recording engineer), and Dan Rose (Assistant Chief Engineer at WBUR, and also my son), made sure it was technically accurate. Lydia Linker kept its language understandable to non-technicians.

That edition was successful. CMP subsequently sold its interest to a much larger publisher, Focal Press. After a few years, Focal's Publisher, Elinor Actipis and I decided industry changes justified a new version. Their Associate Acquisitions Editor Michele Cronin has been in charge of its creation, shepherding resources within the publishing house and in keeping me focused. She also assembled a panel of expert educators and practitioners—including Chris Anderson, Patrick de Caumont, Harry Cheney, Jaime Estrada-Torres, Fred Ginsburg, C.A.S., Jane Jackson, and Paul Werner—to review my ideas and explanations. Focal's Senior Project Manager Paul Gottfeder turned the words into a book. Despite all this help, blame me for any inaccuracy. And please, send me a correction... after all, it's my name on the cover.

I'm particularly grateful to friends who've been sharing their projects with me for more than three decades. Among them, Rob Stegman of Bluestar Media, Marc Neger of Creative Media Group, Francine Achbar of High Impact Marketing and Media, Mike Quell of Jetpak Productions, and Trev Gowdy of Gowdy Productions let me use their clips as examples on the CD. Mitchell Greenspan and the DeWolfe Music Library provided the music, John Moran of Hollywood Edge the sound effects, and busy PBS announcer Don Wescott some narration. The female narrator on the CD is my late wife Carla, a former actress (and one-time spokesperson for Howard Johnson Motels) who then became a writer. She wrote dozens of popular books about Photoshop and digital imaging; in fact, she wrote two of them while helping me through the creation of this book's first edition. I owe her for that and pretty much everything else good in my life. The drawings and photographs, however, are my own work: It's a good thing I specialize in sound and not graphics.
