6TH EDITION

GAS TURBINE THEORY

HIH Saravanamuttoo
Professor Emeritus, Department of Mechanical and Aerospace Engineering, Carleton University

GFC Rogers
Lately Professor Emeritus, University of Bristol

H Cohen
Lately Fellow, Queens' College, Cambridge

PV Straznicky
Professor, Department of Mechanical and Aerospace Engineering, Carleton University
## Contents

**Foreword** vii  
**Prefaces** viii  
**Publisher's Acknowledgements** xvii  

1. **Introduction** 1  
   1.1 Open-cycle single-shaft and twin-shaft arrangements 5  
   1.2 Multi-spool arrangements 9  
   1.3 Closed cycles 10  
   1.4 Aircraft propulsion 12  
   1.5 Industrial applications 20  
   1.6 Marine and land transportation 29  
   1.7 Environmental issues 34  
   1.8 Some future possibilities 36  
   1.9 Gas turbine design procedure 40  

2. **Shaft power cycles** 46  
   2.1 Ideal cycles 46  
   2.2 Methods of accounting for component losses 54  
   2.3 Design point performance calculations 75  
   2.4 Comparative performance of practical cycles 84  
   2.5 Combined cycles and cogeneration schemes 89  
   2.6 Closed-cycle gas turbines 94  

3. **Gas turbine cycles for aircraft propulsion** 100  
   3.1 Criteria of performance 101  
   3.2 Intake and propelling nozzle efficiencies 105  
   3.3 Simple turbojet cycle 114  
   3.4 The turbofan engine 123  
   3.5 The turboprop engine 139  
   3.6 The turboshaft engine 142  
   3.7 Auxiliary power units 143  
   3.8 Thrust augmentation 147  
   3.9 Miscellaneous topics 150
4 Centrifugal compressors 157
   4.1 Principle of operation 158
   4.2 Work done and pressure rise 160
   4.3 The diffuser 168
   4.4 Compressibility effects 173
   4.5 Non-dimensional quantities for plotting compressor characteristics 178
   4.6 Compressor characteristics 181
   4.7 Computerized design procedures 185

5 Axial flow compressors 187
   5.1 Basic operation 188
   5.2 Elementary theory 191
   5.3 Factors affecting stage pressure ratio 194
   5.4 Blockage in the compressor annulus 199
   5.5 Degree of reaction 201
   5.6 Three-dimensional flow 204
   5.7 Design process 213
   5.8 Blade design 234
   5.9 Calculation of stage performance 245
   5.10 Compressibility effects 254
   5.11 Off-design performance 259
   5.12 Axial compressor characteristics 263
   5.13 Closure 270

6 Combustion systems 272
   6.1 Operational requirements 273
   6.2 Types of combustion system 274
   6.3 Some important factors affecting combustor design 277
   6.4 The combustion process 278
   6.5 Combustion chamber performance 283
   6.6 Some practical problems 292
   6.7 Gas turbine emissions 299
   6.8 Coal gasification 311

7 Axial and radial flow turbines 315
   7.1 Elementary theory of axial flow turbine 316
   7.2 Vortex theory 334
   7.3 Choice of blade profile, pitch and chord 341
   7.4 Estimation of stage performance 354
   7.5 Overall turbine performance 364
   7.6 The cooled turbine 366
   7.7 The radial flow turbine 376

8 Mechanical design of gas turbines 385
   8.1 Design process 386
CONTENTS

8.2 Gas turbine architecture 388
8.3 Loads and failure modes 390
8.4 Gas turbine materials 392
8.5 Design against failure and life estimations 412
8.6 Blades 417
8.7 Bladed rotor discs 428
8.8 Blade and disc vibration 434
8.9 Engine vibration 440
8.10 Other components 445
8.11 Closure 451

9 Prediction of performance of simple gas turbines 453
9.1 Component characteristics 456
9.2 Off-design operation of the single-shaft gas turbine 457
9.3 Equilibrium running of a gas generator 463
9.4 Off-design operation of free turbine engine 466
9.5 Off-design operation of the jet engine 477
9.6 Methods of displacing the equilibrium running line 486
9.7 Incorporation of variable pressure losses 489
9.8 Power extraction 490

10 Prediction of performance—further topics 492
10.1 Methods of improving part-load performance 492
10.2 Matching procedures for twin-spool engines 497
10.3 Some notes on the behaviour of twin-spool engines 502
10.4 Matching procedures for turbofan engines 506
10.5 Transient behaviour of gas turbines 508
10.6 Performance deterioration 516
10.7 Principles of control systems 520

Appendix A Some notes on gas dynamics 525
A.1 Compressibility effects (qualitative treatment) 525
A.2 Basic equations for steady one-dimensional compressible flow of a perfect gas in a duct 530
A.3 Isentropic flow in a duct of varying area 533
A.4 Frictionless flow in a constant area duct with heat transfer 534
A.5 Adiabatic flow in a constant area duct with friction 536
A.6 Plane normal shock waves 538
A.7 Oblique shock waves 543
A.8 Isentropic two-dimensional supersonic expansion and compression 547

Appendix B Problems 549
Appendix C References 568
